SUMMARY

Aspiring Fullstack Developer seeking an internship to apply my knowledge of Node.js, React.js, and system architecture. Passionate about writing clean code and building efficient web solutions. I am ready to learn, work hard, and contribute to the company's development goals.

EDUCATION

2022 - Present

National Economics University

Major : Computer Science

GPA : 3.43/4.0

TECHNICAL SKILLS

- **Programming Languages:** Javascript, TypeScript, Python, SQL, Java
- **Frameworks & Libraries:** Node.Js, Expres.JS, Next.Js, React.Js
- **Databases:** MongoDB, MySQL
- **Tools:** Git & GitHub, Postman
- **Other skills :** RESTful API Design, JWT Auth, Socket.io

CERTIFICATIONS

TOEIC 750/990 (Certificate pending)

PROJECTS

Lottery Store Sales Management || Fullstack

Sep 2025 - Present

Link GitHub

- **Backend :** <https://github.com/Vanbq1204/Lottery-api>
- **Frontend :** <https://github.com/Vanbq1204/Lottery-web>

Link : <https://vjamin.vercel.app/>

Technologies: React 18, Node.js, Express.js, MongoDB, Socket.io, Tesseract.js

Technical Contributions:

- Frontend (React): Built an interactive Single Page Application (SPA) for store management. Integrated Tesseract.js (OCR) to automatically extract data from lottery ticket images, speeding up sales input.
- Backend (Node.js & Express): Engineered REST APIs to handle high-volume text messages and invoices. Automated daily tasks like report generation and data cleanup using node-cron.
- Real-time Dashboard (Socket.io): Implemented WebSocket connections to instantly update sales data (new, edited, or deleted invoices) across management dashboards without reloading the page.
- Database (MongoDB & Mongoose): Designed NoSQL schemas to manage multi-level user roles (SuperAdmin, Admin, Employee), store networks, and complex financial calculations (debts and revenue).
- Security & Auditing: Secured the system with JWT authentication. Integrated Geolocation APIs and OpenStreetMap to track and log the physical locations of important transactions for fraud prevention.

CourseDan - E-Learning Platform || Frontend

Jul 2025 - Sep 2025

Link GitHub : <https://github.com/ARPHAM/coursedan>

Technologies: Next.js (App Router), TypeScript, Tailwind CSS, Ant Design, React Query, Recharts.

Technical Contributions:

- Built 3 role-based portals (Admin, Teacher, Student) using Next.js App Router for seamless routing and access control.
- Developed B2C & B2B features: Implemented course discovery, shopping cart, learning dashboard for students, and content management tools for teachers.
- Data Visualization: Integrated Recharts to create interactive admin dashboards for tracking revenue, user growth, and course statistics.
- State & API Management: Utilized React Query (TanStack) and Axios for efficient server-state caching and dynamic data fetching.
- UI/UX & Forms: Built responsive interfaces with Tailwind CSS & Ant Design, and handled complex form validations (authentication, course creation) using React Hook Form.
